

HMI Visualization Options

Dan Kandray

January 30, 2020

PanelView Plus HMI Terminals

- Human Machine Interfaces were developed to replace hardwired panel controls including:
 - Pushbuttons
 - Selector Switches
 - Pilot Lights
 - Additional features include:
 - Data-entry fields, message displays, alarms, diagnostics, screen selectors, full color graphic objects, and animation
- Run applications designed using FactoryTalk View ME (machine edition) software OR Connected Components Workbench (CCW) software (PanelView 800 only)

Control System Visualization Considerations

Swagelok

To control a machine, consider these options	
If you want to use...	Consider this product line...
Open architecture with your own software:	VersaView 5200 Thin Client
Small or Medium Computers	VersaView 5400
Large Computers	6181P or 6177R
Hazardous Location Computers	6181X
Display-only Monitors	VersaView 5100 6176M 6186M
Small HMI Systems	PanelView 5310 PanelView 800 PanelView Plus 7 Standard PanelView Plus 6 Compact
Medium or Large HMI Systems	PanelView Plus 6 PanelView Plus 7 Performance PanelView 5500 PanelView 5510 Mobile View

Additional Considerations

- Which controller and communication network are you connecting to?
- Which development environment (runtime version) does the terminal need to support?
- Which terminal size and screen count do you need?
- How many controllers and alarms do you need?
- Which features are required and desired?

PanelView Terminal Comparison

Screen Count / Controllers / Alarms	No limit (based on memory and CPU)	50 (25 replace, 25 on-top faceplates)/1/500	No limit (based on memory and CPU)	25/1/200 **

HMI Levels of Control

- Component Class
 - PanelView 800 & Micro800 PLCs
- Small Control Class
 - Midrange Class
 - PanelView Plus 7 Standard & Performance
 - Supports Star, Linear and Device Level Ring Configuration
- Integrated Architecture Class
 - ControlLogix and PanelView 5500s & PanelView Plus 7 Performance

Component Class Configurations

Swagelok

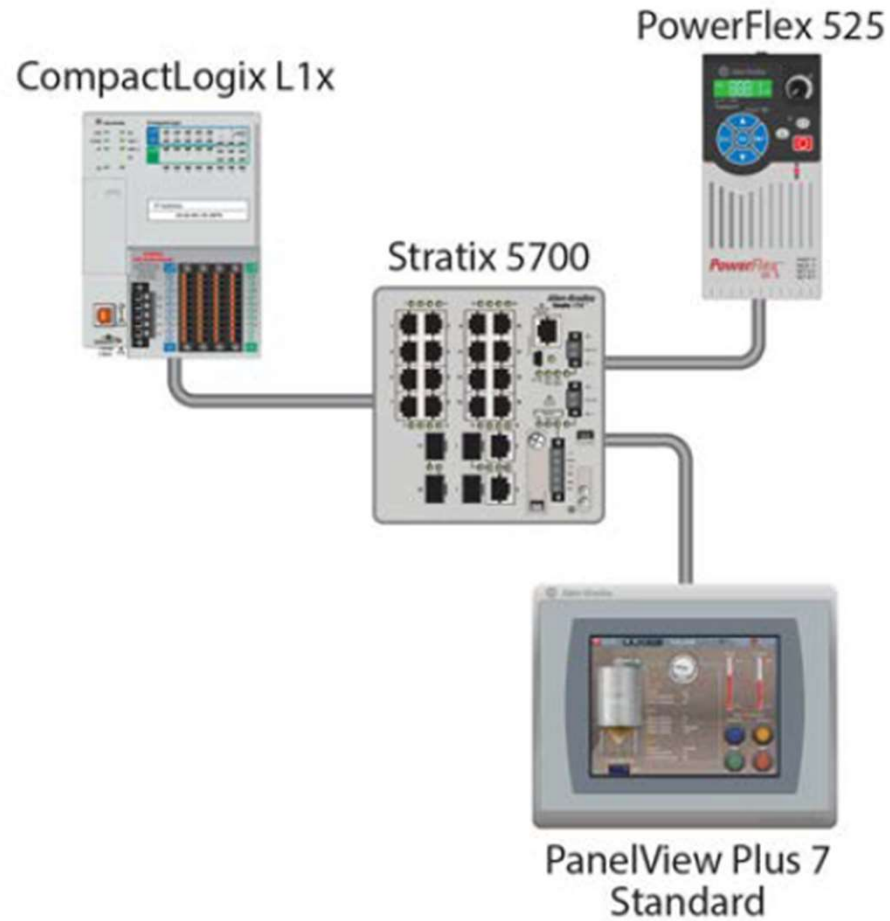

Micro800® with PanelView 800

Small Control Class Configurations

Linear Configuration

Small Control Class Configurations

Swagelok

Device Level Ring (DLR) Configuration

Note: PanelView Plus 7 Performance terminals come with DLR and PanelView Plus 7 Standard terminals have DLR only as an option.

Common HMI Terminals

Swagelok

- PanelView Plus 7 HMIs
 - Optimized for the following applications:
 - Individual machines or small processes
 - Machine-level monitoring & control (Small Control Class Configurations)
 - Operator Interaction

PanelView Plus 7 HMI's – Available in two versions:

Swagelok

1. PanelView Plus 7 Standard (touchscreen only)
 - Focused toward machine builders
 - Available in 4 in to 15 in screens
 - Connects to one ControlLogix or CompactLogix controller via **EtherNet/IP only**
 - Supports up to 50 displays (screens) and 500 alarms

PanelView Plus 7 HMI's – Available in two versions:

Swagelok

2. PanelView Plus 7 Performance (touch or keypad/touch)
 - Focused toward industries requiring more complex applications
 - Number of displays and alarms depends on memory and CPU
 - Provides EtherNet/IP connectivity with embedded switch (Device Level Ring)
 - Supports Windows CE 6.0 extended features

PanelView 800 Terminals

- For Component Class Configurations
 - Reduced Cost
 - 4, 7, and 10 inch displays
- Integrates with:
 - MicroLogix
 - Micro800
 - CompactLogix 5370 (L1, L2, & L3)
 - SLC 500
- Programmed with Connected Components Workbench
- Supports 25 screens and 200 alarms
- EtherNet/IP and Serial communication ports

Other HMIs

- PanelView Plus Terminals
 - Introduced in 2003 (transitioning to legacy)
 - Locked at Windows CE V4.1
 - Remain in support due to widest range of communications options:
 - ControlNet, DH+, DH-485, EtherNet/IP, Remote I/O, RS-232 and Device Net
- PanelView Plus 6 Terminals
 - Support Windows CE V6.0
 - Optimized for higher-performance application needs
 - Modular, with many configuration options and capabilities
